why **minium** ?

Minium is a framework
developed at **VILT**

problem

Nowadays software needs to be more and more reliable. The industry needs software to be deployed fast and with assurance of quality.

The existing tools for front-end testing are often difficult to use and to automate

solution

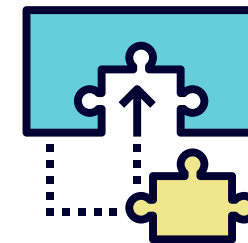

Minium has a friendly IDE with a point-and-click tool to help you test the functionality of your website in the same way a human does.

It's also very easy to learn and see the tests executing in your own browser while you write them.

The enterprise solution can be easily scaled for all the needed browsers, and allows stakeholders to easily control the quality of a project with intuitive reports.

so why **minium**?

- ◊ Improves upon Selenium
- ◊ Has a gentle learning curve
- ◊ Is based on technologies frontend developers are familiar with
- ◊ Is easy to integrate in your build process
- ◊ Records tests with just point-and-click
- ◊ Has intuitive management reports
- ◊ Saves videos of your test executions
- ◊ Can be used by people with no technological background
- ◊ Makes it easy to automate tasks on web applications

Minium comes in **two flavours**

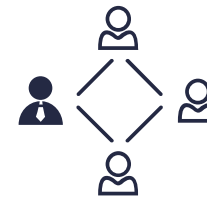

It's a console aimed at developers, allowing the creation of automatic tasks in the browser to be used in end-to-end testing of your web applications

**Local Developer
Solution**

Minium Prime is an enterprise solution that includes **Minium Manager**, a platform to manage, run and monitor end-to-end tests, and **Minium Recorder** is a plugin for the browsers that makes it easy to create tests visually

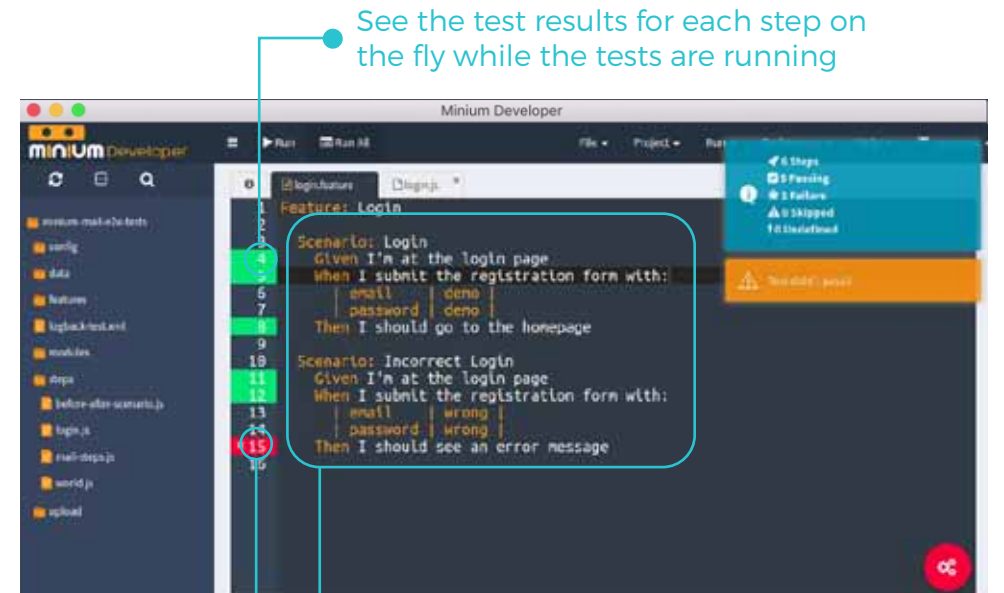

**Enterprise
Solution**

Minium Developer is the developer's solution for creating and executing tests on their own machine

- ◊ IDE for testers
- ◊ Allows to try your code as you write it
- ◊ Autocomplete and Highlighting
- ◊ Task automation on the web
- ◊ Open-source
